- **The LSND experiment and the status of sterile neutrinos**
- **Determination of neutrino oscillation parameters by future experiments**
leading solar and atmospheric parameters
determination of θ_{13} , the CP-phase, and the mass hierarchy

Outline

- **Introduction**
status of three-flavour neutrino oscillations
- **The LSND experiment and the status of sterile neutrinos**
- **Determination of neutrino oscillation parameters by future experiments**
leading solar and atmospheric parameters
determination of θ_{13} , the CP-phase, and the mass hierarchy
- **Summary**

Before starting...

I will not speak about determination of the **absolute neutrino mass**

- tritium beta decay experiments
- neutrino-less double-beta decay experiments
- cosmological observations

Before starting...

I will not speak about determination of the **absolute neutrino mass**

- tritium beta decay experiments
- neutrino-less double-beta decay experiments
- cosmological observations

but I stress that

such experiments are an important part of the neutrino program, and provide complementary information to oscillation experiments

Introduction

Evidences for neutrino oscillations:

Introduction

Evidences for neutrino oscillations:

- atmospheric (SK, MACRO, Soudan) and accelerator (K2K) neutrinos

natural explanation in three-flavour framework

3-flavour oscillation parameters

$$U = \begin{matrix} & \Delta m_{31}^2 & & & \Delta m_{21}^2 \\ \begin{pmatrix} 1 & 0 & 0 \\ 0 & c_{23} & s_{23} \\ 0 & -s_{23} & c_{23} \end{pmatrix} & \begin{pmatrix} c_{13} & 0 & e^{-i\delta} s_{13} \\ 0 & 1 & 0 \\ -e^{i\delta} s_{13} & 0 & c_{13} \end{pmatrix} & \begin{pmatrix} c_{12} & s_{12} & 0 \\ -s_{12} & c_{12} & 0 \\ 0 & 0 & 1 \end{pmatrix} \end{matrix}$$

3-flavour oscillation parameters

$$U = \begin{pmatrix} 1 & 0 & 0 \\ 0 & c_{23} & s_{23} \\ 0 & -s_{23} & c_{23} \end{pmatrix} \begin{pmatrix} c_{13} & 0 & e^{-i\delta} s_{13} \\ 0 & 1 & 0 \\ -e^{i\delta} s_{13} & 0 & c_{13} \end{pmatrix} \begin{pmatrix} c_{12} & s_{12} & 0 \\ -s_{12} & c_{12} & 0 \\ 0 & 0 & 1 \end{pmatrix}$$

atmospheric + K2K

solar + KamLAND

3-flavour oscillation parameters

Two possibilities for the neutrino mass spectrum:

$$\Delta m_{31}^2 > 0$$

$$\Delta m_{31}^2 < 0$$

3-flavour oscillation parameters

mass-squared differences:

parameter	bf $\pm 1\sigma$	1 σ acc.	3 σ range
Δm_{21}^2 [10^{-5}eV^2]	7.9 ± 0.3	4%	7.1 – 8.9
$ \Delta m_{31}^2 $ [10^{-3}eV^2]	$2.2^{+0.37}_{-0.27}$	14%	1.4 – 3.3

mixing angles:

parameter	bf $\pm 1\sigma$	1 σ acc.	3 σ range
$\sin^2 \theta_{12}$	$0.31^{+0.02}_{-0.03}$	9%	0.24 – 0.40
$\sin^2 \theta_{23}$	$0.50^{+0.06}_{-0.05}$	11%	0.34 – 0.68
$\sin^2 \theta_{13}$	—	—	≤ 0.046

updated from M. Maltoni, T. Schwetz, M.A. Tortola and J.W.F. Valle, hep-ph/0405172

The LSND puzzle

The LSND puzzle

evidence for $\bar{\nu}_\mu \rightarrow \bar{\nu}_e$ oscillations

A. Aguilar *et al.*, PRD 64 (2001) 112007

$87.9 \pm 22.4 \pm 6.0$ excess events

$P = (0.264 \pm 0.067 \pm 0.045)\%$

$\sim 3.3\sigma$ away from zero

The LSND puzzle

evidence for $\bar{\nu}_\mu \rightarrow \bar{\nu}_e$ oscillations

LSND and a decaying sterile neutrino

oscillation interpretation

LSND and a decaying sterile neutrino

Palomares-Riuz, Pascoli, Schwetz, hep-ph/0505216

postulate decay of heavy neutrino ν_h into ν_l and a scalar Φ

$$\mathcal{L} = -g \bar{\nu}_{lL} \nu_{hR} \Phi + \text{h.c.}$$

need $g m_h \sim \text{eV}$ and $|U_{\mu 4}|^2 \sim 10^{-2}$ (e.g., $g \sim 10^{-6} - 10^{-3}$, $m_h \sim \text{keV} - \text{MeV}$)

LSND and a decaying sterile neutrino

Palomares-Riu, Pascoli, Schwetz, hep-ph/0505216

$$PG_{(3+1)} = 0.002\%, \quad PG_{(3+2)} = 2.1\%$$

$$PG_{\text{decay}} = 4.6\%$$

for the rest of the talk I assume that

- MiniBooNE does not see a signal, and
- LSND finds some explanation not related to neutrinos

for the rest of the talk I assume that

- MiniBooNE does not see a signal, and
- LSND finds some explanation not related to neutrinos

→ **Standard three-neutrino oscillation framework**

3-flavour oscillation

Open questions:

3-flavour oscillation

Open questions:

- Increase the precision on solar and atmospheric parameters (e.g. **Is θ_{23} exactly 45° ?**)

3-flavour oscillation

Open questions:

- Increase the precision on solar and atmospheric parameters (e.g. **Is θ_{23} exactly 45° ?**)
- How small is θ_{13} ?

3-flavour oscillation

Open questions:

- Increase the precision on solar and atmospheric parameters (e.g. **Is θ_{23} exactly 45° ?**)
- How small is θ_{13} ?
- What is the value of the CP phase δ ?

3-flavour oscillation

Open questions:

- Increase the precision on solar and atmospheric parameters (e.g. **Is θ_{23} exactly 45° ?**)
- How small is θ_{13} ?
- What is the value of the CP phase δ ?
- Type of the neutrino mass ordering (sign of Δm_{31}^2)

Improving on the 'solar' parameters

$$\theta_{12} \text{ and } \Delta m_{21}^2$$

Low energy solar neutrino experiments

J.N. Bahcall, Pena-Garay, hep-ph/0305159

- Solar neutrino data 2003
- 3 years simulated KamLAND data
- 5% measurement (1σ) of the ${}^7\text{Be}$ flux
- 3% and 1% measurement (1σ) of the pp flux

Improving on the 'atmospheric' parameters

$$\theta_{23} \text{ and } |\Delta m_{31}^2|$$

Atmospheric parameters $|\Delta m_{13}^2|$ and θ_{23}

ν_μ -disappearance in LBL accelerator experiments

Atmospheric parameters $|\Delta m_{13}^2|$ and θ_{23}

ν_μ -disappearance in LBL accelerator experiments

upcoming experiments:

- conventional beam experiments
MINOS, CNGS
- superbeam experiments
T2K, NO ν A

assume 5 yrs of running in neutrino mode

Atmospheric parameters $|\Delta m_{13}^2|$ and θ_{23}

MINOS+CNGS

T2K

NO ν A

combined

Huber, Lindner, Rolinec, Schwetz, Winter, hep-ph/0403068

Atmospheric parameters $|\Delta m_{13}^2|$ and θ_{23}

$$\text{precision at } 3\sigma \equiv \frac{\text{upper}^{(3\sigma)} - \text{lower}^{(3\sigma)}}{\text{true value}}$$

for true values $|\Delta m_{31}^2| = 2 \cdot 10^{-3} \text{eV}^2$ and $\sin^2 \theta_{23} = 0.5$:

	$ \Delta m_{31}^2 $	$\sin^2 \theta_{23}$
current	86%	68%
MINOS+CNGS	26%	78%
T2K	12%	46%
NOνA	25%	86%
Combination	9%	42%

Atmospheric parameters $|\Delta m_{13}^2|$ and θ_{23}

Atmospheric parameters $|\Delta m_{13}^2|$ and θ_{23}

H. Minakata, M. Sonoyama and H. Sugiyama, hep-ph/0406073

Atmospheric parameters $|\Delta m_{13}^2|$ and θ_{23}

subsequent generation of LBL experiments like

T2HK, CERN-Frejus exps (**SPL**, **BB**), **NuFact**

will provide a

sub-percent determination of $|\Delta m^2|$ and $\sin^2 2\theta_{23}$!

What is the value of θ_{13} ?

What is the value of θ_{13} ?

- naively one would expect $\theta_{12} \sim \theta_{23} \sim \theta_{13}$
→ θ_{13} around the corner

What is the value of θ_{13} ?

- naively one would expect $\theta_{12} \sim \theta_{23} \sim \theta_{13}$
→ θ_{13} around the corner
- $\theta_{13} \ll 1$ hint for some symmetry

What is the value of θ_{13} ?

- naively one would expect $\theta_{12} \sim \theta_{23} \sim \theta_{13}$
→ θ_{13} around the corner
- $\theta_{13} \ll 1$ hint for some symmetry
- relatively large θ_{13} opens the possibility to observe generic 3-flavour effects (CP-violation)

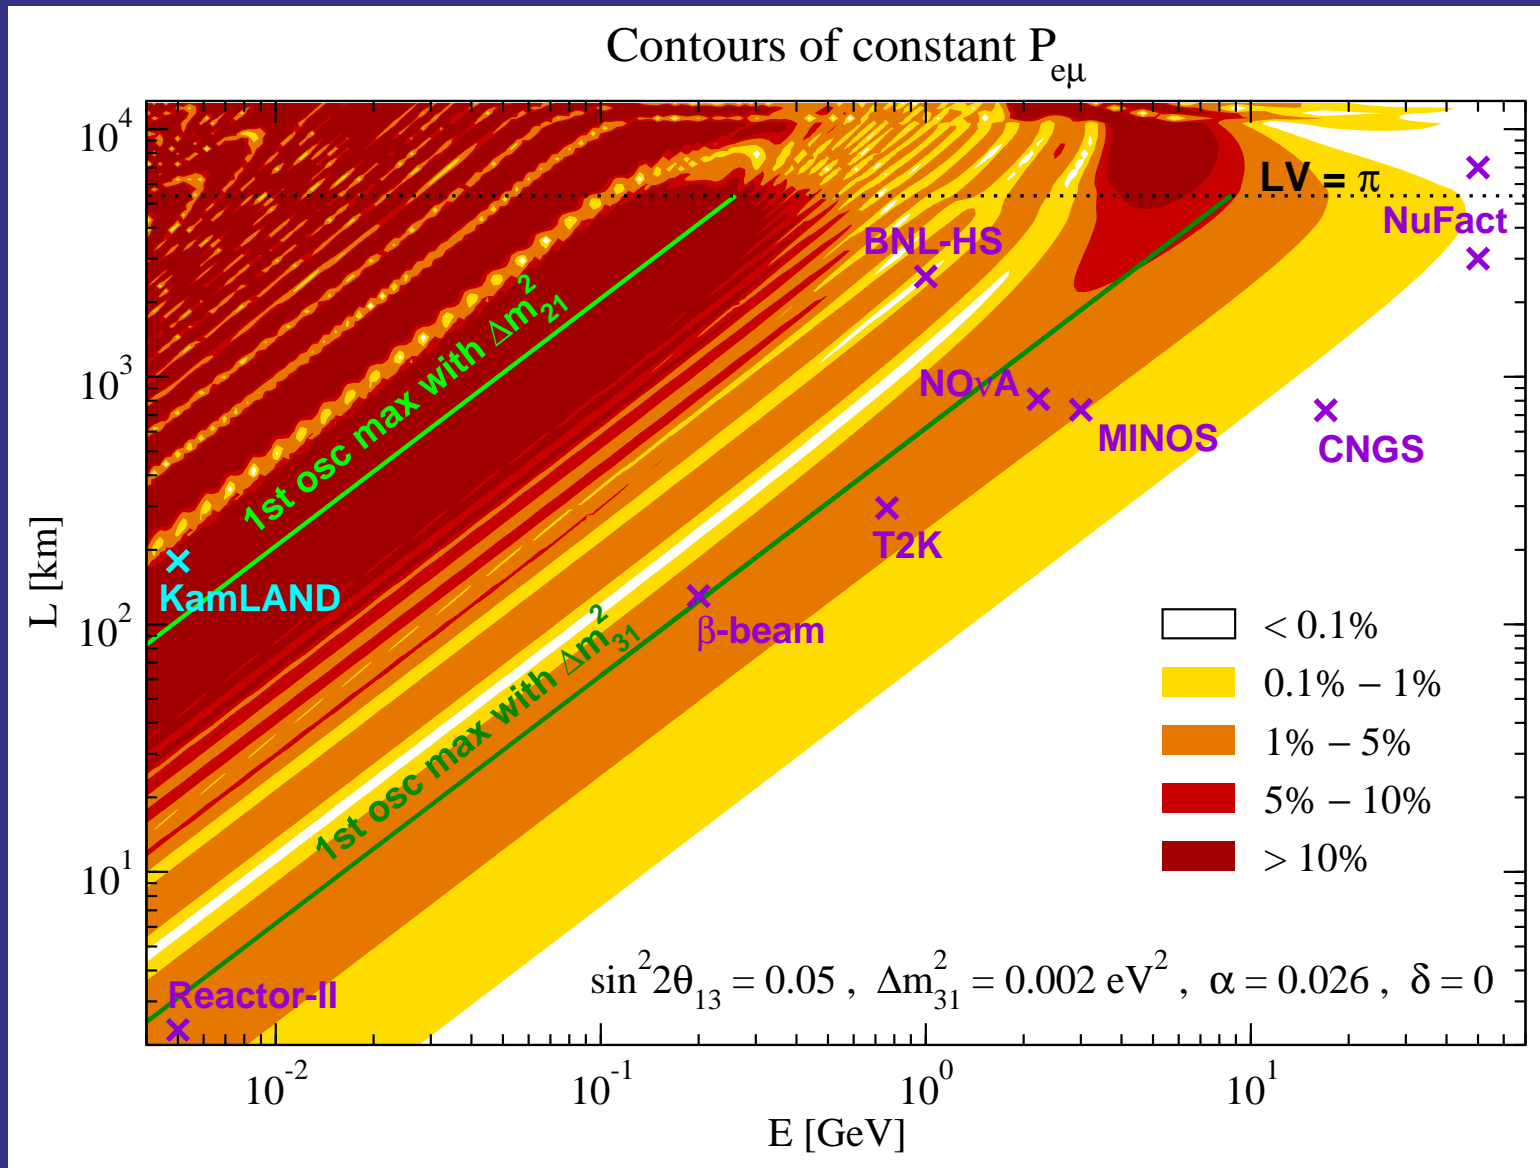

Measuring θ_{13}

- reactor experiments with near and far detectors
D-Chooz, KASKA, Daya Bay, Angra, Braidwood, RENO
- LBL $\nu_{\mu} \rightarrow \nu_e$ appearance experiments
MINOS, CNGS, T2K, NO ν A, T2HK, SPL, BB, NuFact

Measuring θ_{13}

Measuring θ_{13}

Measuring θ_{13} by $\nu_{\mu} \rightarrow \nu_e$ at beams

The measurement of θ_{13} with the $\nu_{\mu} \rightarrow \nu_e$ appearance channel suffers from **correlations** and **degeneracies**:

G.L. Fogli, E. Lisi, Phys. Rev. D54 (1996) 3667

J. Burguet-Castell et al., Nucl. Phys. B608 (2001) 301

H. Minakata, H. Nunokawa, JHEP 10 (2001) 001

V.Barger, D.Marfatia, K.Whisnant, Phys. Rev. D65 (2002) 073023; D66 (2002) 053007

P.Huber, M.Lindner, W.Winter, Nucl. Phys. B645 (2002) 3; Nucl. Phys. B654 (2003) 3

and many more

Not $\sin^2 2\theta_{13}$, but only a specific **parameter combination** is measured very accurately

The $\nu_\mu \rightarrow \nu_e$ oscillation probability in vacuum

$$P_{\mu e} \simeq \sin^2 2\theta_{13} \sin^2 \theta_{23} \sin^2 \Delta_{31}$$

$$\mp \alpha \sin 2\theta_{12} \sin 2\theta_{13} \sin \delta \cos \theta_{13} \sin 2\theta_{23} \sin^3 \Delta_{31}$$

$$- \alpha \sin 2\theta_{12} \sin 2\theta_{13} \cos \delta \cos \theta_{13} \sin 2\theta_{23} \cos \Delta_{31} \sin^2 \Delta_{31}$$

$$+ \alpha^2 \sin^2 2\theta_{12} \cos^2 \theta_{23} \sin^2 \Delta_{31},$$

with

$$\Delta_{31} \equiv \frac{\Delta m_{31}^2 L}{4E_\nu}, \quad \alpha \equiv \frac{\Delta m_{21}^2}{\Delta m_{31}^2} = 0.035^{+0.009}_{-0.004}$$

Measuring $\sin^2 2\theta_{13}$ at reactors

“Clean” measurement of $\sin^2 2\theta_{13}$:

$$P_{ee} \approx 1 - \sin^2 2\theta_{13} \sin^2 \frac{\Delta m_{31}^2 L}{4E_\nu} + \left(\frac{\Delta m_{21}^2 L}{4E_\nu} \right)^2 \cos^4 \theta_{13} \sin^2 2\theta_{12}$$

last term negligible for $\frac{\Delta m_{31}^2 L}{4E_\nu} \sim \pi/2$ and $\sin^2 2\theta_{13} \gtrsim 10^{-3}$

determination of θ_{13} is free of correlations and degeneracies

P. Huber, M. Lindner, T. Schwetz and W. Winter, Nucl. Phys. B **665** (2003) 487 [hep-ph/0303232]

The problem of degeneracies

Parameter degeneracies in LBL experiments provide a severe limitation for the determination of θ_{13} , the CP phase δ and the hierarchy!

Degeneracies and T2HK

allowed regions at
 2σ , 99%, 3σ CL

true values:

$$\sin^2 2\theta_{13} = 0.03$$

$$\delta = -0.85\pi$$

$$\sin^2 \theta_{23} = 0.4$$

$$\Delta m_{31}^2 = 2.2 \times 10^{-3} \text{eV}^2$$

Degeneracies and T2HK

allowed regions at
 2σ , 99%, 3σ CL

true values:

$$\sin^2 2\theta_{13} = 0.03$$

$$\delta = -0.85\pi$$

$$\sin^2 \theta_{23} = 0.4$$

$$\Delta m_{31}^2 = 2.2 \times 10^{-3} \text{eV}^2$$

Degeneracies and T2HK
